IMPLANT MAINTENANCE SOLUTION

Straumann® TiBrush™ – designed for an effective open-flap debridement of titanium implant surfaces in bone defects caused by peri-implantitis.

DEBRIDEMENT OF IMPLANT SURFACE

Before cleaning with TiBrush™

SEM investigation of the uncleaned implant surface: Implant surface is covered with a biofilm.

After cleaning with TiBrush™

SEM investigation of the implant surface cleaned with TiBrush™.

THE STRAUMANN® TiBrush™ OFFERS CLINICIANS THE FOLLOWING BENEFITS

- Gentle on metal implant surfaces^{1,2}
- More effective and efficient at debriding implant surface^{1,3}
- Optimized access to implant threads with fine titanium bristles¹

LESS ABRASIVE ON THE IMPLANT SURFACE²

SEM Investigation of damage to the titanium implant surface shows significantly less damage caused by TiBrush™ compared to commonly used metal curettes.²
Titanium acting on titanium surface results in less damage to implant surface.²

Untreated surface

TiBrush™

Metal curettes

MORE EFFECTIVE AND EFFICIENT AT DEBRIDING IMPLANT SURFACE THAN METAL CURETTES²

Straumann® TiBrush™ removes over 90% of biofilm within 3 minutes of use, which is significantly more effective than a curette³

Straumann® TiBrush™ with 40% decrease in cleaning time versus a curette³
